

IMPORTANT – Please Read!

- Do not replace your current Products files with these files until:
 - (1) You have verified that your KNK Studio will no longer work with the current files.
 - (2) You have backed up your current files, Products.ini and Products.lcf into another folder, just in case.
- The purpose of these files is to allow KNK Studio to work for several steps allowing you to open an existing KNK file and copy/paste shapes to Inkscape or to Make The Cut. The software WILL crash after one or two copies. But you can reopen KNK Studio and continue.
- There are two files: one for the Dongled version of KNK Studio and one for the No Dongle version. Even if you have lost the dongle, use the Dongled version if it's your original version. On the other hand, if you have to reinstall KNK Studio, then use the trial version of the No Dongle KNK Studio at the following link and then replace the products files in that installation with those from the No Dongle zip.
